

# Introduction to Actuarial Audit under IFRS 17

Leonardo Valentino Kosasih

Institut Teknologi Bandung

February 10, 2026

# Agenda

- ① Actuarial Science and Accounting
- ② Overview of IFRS 17
- ③ Scope of IFRS 17
- ④ Recognition and Measurement under IFRS 17
- ⑤ Remeasurement
- ⑥ Financial Disclosures

# My Personal Goal from Today's Session I

- 1 Sharing 30% accounting knowledge 70% actuarial application
- 2 Showing you some memes along the presentation so keep your eyes open :D
- 3 Audit is about how you think, not just what you do.
- 4 Prevent one of these things to happen to you during your first internship/job

(Thanks to: John Lee)

# My Personal Goal from Today's Session II

- 5 Your natural reaction after the sharing session:

# Out of Scope

- ① Reinsurance Contract Held
- ② Shariah Insurance
- ③ Goodwill
- ④ Insurance Merger and Acquisition (M&A)
- ⑤ Making you an IFRS17 wizard

Meme I have to put in but don't think fit anywhere in the topic

soon

## Please read

- **Purpose:** knowledge sharing / general educational content.
- **Not advice:** this is *not* actuarial, accounting, audit, or legal advice.
- **Use at your own risk:** any reliance or decisions are the user's responsibility.
- **No liability:** the presenter and affiliated institutions are not liable for any loss, damage, or claim arising from use or interpretation of these slides.

# Actuarial Science and Accounting

IFRS 17 actuarial audit

# Actuaries and Accountants

Why do these memes exist? Is it true? (Credit to: John Lee)

# Accounting Standards for Insurance

In (re)insurance one of the International Financial Reporting Standards (IFRS) we use is IFRS 17 : Insurance Contract. In every IFRS, it has 3 major sections:

- ① Scope: which items are covered by the IFRS (accounting),
- ② Recognition and Measurement: how to record the initial balance (actuarial science),
- ③ Disclosure: how to present the result in financial disclosures (accounting).

Doing the actuarial audit, means that we need to check the **documentation, assumptions used** and whether it align with the **standards**.

# Example of IFRS17 Financial Statement - Balance Sheet - Life Insurance

Below is the Prudential Life snapshots of IFRS17 disclosure access on 6 February 2026.

|                                                                                    |      | 2025 \$m       | 2024 \$m       |                |

|             |
|-------------|
| <b>Note</b> |
|-------------|

## Note

Included within equity securities and holdings in collective investment schemes and debt securities as at 30 June 2025 are \$1,599 million of lent securities and assets subject to repurchase agreements (30 June 2024: \$1,680 million; 31 December 2024: \$1,565 million).

Observe that the Insurance Contract Liabilities (ICL) is around 80% of the total equity and liabilities, which make it more important to verify whether the amount is correct.

<sup>1</sup> Includes restructuring provisions, litigation and regulatory provisions (see note 15) and other provisions.

<sup>2</sup> As of December 31, 2024, the Group had USD 1.2 billion of liabilities held for sale based on agreements signed to sell portfolios of Zurich Insurance plc (now known as Zurich Insurance Europe AG) and Zurich Insurance Company Ltd, UK Branch (see note 4). In 2023, the Group had USD 23.9 billion of liabilities held for sale based on agreements signed to sell portfolios of Zurich Deutscher Herold Lebensversicherung Aktiengesellschaft, Zurich Chile Seguros de Vida S.A., Zurich Insurance plc (now known as Zurich Insurance Europe AG) and Zurich Insurance Company Ltd, UK Branch (see note 4).

Observe that the Insurance Contract Liabilities (ICL) is around 60% of the total equity and liabilities, which make it more important to verify whether the amount is correct.

# Overview of IFRS 17

IFRS 17 actuarial audit

# Introduction to Insurance Contract

**Insurance contract** is a contract under which one party (the issuer) accepts **significant insurance risk** from another party (the policyholder) by agreeing to **compensate** the policyholder if a specified **uncertain future event** (the insured event) adversely affects the policyholder.

*Source: IFRS 17, Appendix A (Definitions).*

Typical lifecycle of an insurance as a policyholder:

But how to determine the **significant insurance risk**?

# What is an insurance contract (conceptually)? I

Insurance risk is significant if and only if, an insured event could cause the issuer to pay **additional amounts** that are significant in any single scenario, excluding scenarios that have no commercial substance (i.e., no discernible effect on the economics of the transaction)...

*Source: IFRS 17, Appendix B18*

The additional amounts above are determined on a present-value basis.

*Source: IFRS 17, Appendix B20*

# What is an insurance contract (conceptually)? II

**The additional amounts** refer to the present value of amounts that exceed those that would be payable if no insured event had occurred (excluding scenarios that lack commercial substance). Those additional amounts include claims handling and assessment costs, but exclude:

- the loss of the ability to charge the policyholder for future service,
- a waiver, on death, of charges that would be made on cancellation or surrender,
- a payment conditional on an event that does not cause a significant loss to the holder of the contract,
- possible reinsurance recoveries.

*Source: IFRS 17, Appendix B21*

Or as an actuary, this means to:

$$\frac{\sum_i E [\text{PVCF}_{i, \text{claim event}}]}{\sum_i E [\text{PVCF}_{i, \text{no claim event}}]} \quad (1)$$

# Quick Break

From this section, now you know how to answer this question from a very famous "*star*"

# Recognition and Measurement under IFRS 17

IFRS 17 actuarial audit

# Where's My Money?

We are going to take a closer look on the lifecycle of an insurance from previous slide and ask ourselves, "what happened to the money after policyholders pay the premium? Does the insurer just keep the money in a bank? Pay claims to other policyholder? or just hope that no claim will submitted ?

When the insurance issued, the insurance directly become a liability to the insurer meaning that the insurance company is liable to pay the policy holder if a claim event happened. But it doesn't mean that every insurance will be a liability to the insurance company. There will be some cases where the insurance can be an assets (as we see in the previous balance sheet examples).

# What's inside the Insurance Contract Liability (ICL)?

# Level of Aggregation (LoA)

Before we move to the building blocks, and measurement model, IFRS17 requires to aggregate (group) insurance contracts into portfolios. IFRS 17 is clear on how contracts should be grouped. There are three criteria:

- Similar risk: product type or characteristics (e.g., premium payment mode),
- Profitability: expected profitability of the product,
- Annual cohort: issue year of the insurance contract. IFRS17 prohibits to include contracts issued more than one year apart in the same group

*Source: IFRS 17, Para. 14, 16, 22*

This aggregation is done only at the initial recognition of the contract *Source: IFRS 17, Para. 24*

# Level of Aggregation (LoA) - Profitability I

IFRS17 requires that the product is divided at least into 3 profitability group i.e.,:

- Onerous at initial recognition
- No Significant Possibility of Becoming Onerous (NSPBO)
- Remaining

*Source: IFRS 17, Para. 16*

IFRS17 defines onerous insurance contract at the date of initial recognition if the **Fulfilment Cash Flows (FCF)** allocated to the contract, any previously recognised **Insurance Acquisition Cash Flows (IACF)** and any cash flows arising from the contract at the date of initial recognition in total are a **net outflow**.

*Source: IFRS 17, Para. 47*

# Level of Aggregation (LoA) - Profitability II

There is no specific guideline from IFRS 17 in determining NSPBO and remaining category, but it requires an insurance company to assess the methodology to tag NSPBO or remaining category based on

- likelihood of changes in assumptions which, if they occurred, would result in the contracts becoming onerous
- using information about estimates provided by the entity's internal reporting

*Source: IFRS 17, Para. 19*

Re-read this section and edit if needed

IFRS 17 actuarial audit

# What to Measure

On initial recognition, an entity shall measure a group of insurance contracts at the total of:

- the Fulfilment Cash Flows (FCF), which comprise:
  - estimates of future cash flows
  - an adjustment to reflect the time value of money and the financial risks related to the future cash flows, to the extent that the financial risks are not included in the estimates of the future cash flows, and
  - Risk Adjustment (RA) for non-financial risk
- the Contractual Service Margin (CSM)

*Source: IFRS 17, Para. 32*

We can re-write FCF in a more familiar term to be:

$$\text{FCF} := E [\text{PVCF}] + \text{RA} = \text{BEL} + \text{RA} \quad (2)$$

where BEL stands for Best Estimate Liability. However we are going to discuss on, which future cash flow should be included in BEL calculation, how to choose the discount rate and how to calculate RA.

# Contract Boundary I

Tomorrow's problems

# Discount Rate

The discount rates applied to the estimates of the future cash flows described previously shall:

- ① reflect the time value of money, the characteristics of the cash flows and the **liquidity characteristics** of the insurance contracts;
- ② be consistent with observable current market prices (if any) for financial instruments with cash flows whose characteristics are consistent with those of the insurance contracts, in terms of, for example, timing, currency and liquidity; and
- ③ exclude the effect of factors that influence such observable market prices but do not affect the future cash flows of the insurance contracts.

*Source: IFRS 17, Para. 36*

What interesting in the paragraph above is that we may use a lower or higher discount rate based on the liquidity characteristics of the insurance contracts which means there is an additional assessment on how to determine how liquid is an insurance contract and the corresponding *buffer* one should add or subtract from the current discount rate.

# Risk Adjustment

Will always be

Explain on there are different model for different type of insurance (GMM, PAA, and VFA). It is optional to use GMM or PAA but it is mandatory to use VFA if the insurance contract, pass the eligibility.

All model

VFA direct participating

PAA short term

# Bit of Bonus on Transition Method

This is actually a set up to ending remarks. FVA, FRA, MRA

# What happened to the premium so far

Based on the explanation so far, the premium paid to the insurer will directly become a LfRC then what happened ?

But can LfIC be calculated at initial recognition?

# Remeasurement

## IFRS 17 actuarial audit

What is LfIC and how to calculate

put my undergrad thesis a bit and a bit from exam 5

IFRS 17 actuarial audit

# Financial Disclosure and Statement Mapping

IFRS 17 actuarial audit

# Where does it show up in the financial statements?

- **Balance sheet:** insurance contract assets or liabilities (and reinsurance assets).
- **P&L:**
  - insurance service result (revenue, service expenses, onerous losses),
  - insurance finance income/expenses (unwind + discount-rate changes; presentation policy matters).
- **Disclosures:** reconciliations/roll-forwards tying opening to closing balances.

# Remeasurement mapping (illustrative)

| Driver                            | Actuarial output                | Accounting impact                                         |
|-----------------------------------|---------------------------------|-----------------------------------------------------------|
| New claims information            | Updated assumptions / triangles | Past service effect in service result; LfRC movement      |
| Future-service assumption changes | Updated projection model        | Unlock CSM (future service) and change in LfRC            |
| Discount curve unwind / up-dates  | Interest accretion / OCI option | Finance income/expense (P&L and/or OCI) and remeasurement |
| Onerous recognition / LC          | Profit testing                  | Immediate loss in P&L; LC tracking in LfRC                |
